OBJECTIVE

In the recent times, research-activity in various branches of Chemistry has evolved at a much faster pace than ever before. Furthermore, there has been an incessant concern regarding the analyses of issues in depth that have direct relevance to Chemistry education. Frequent alteration to modern research activity is imperative for the enrichment of novel ideas that span from purely academics to research-activity having applied character.

A National Seminar on "**Emerging trends in Chemical Sciences"** will indeed be a step in that direction and is precisely justified in the current context. The present seminar will focus on various aspects of the present-day "Chemical Research" activities that can motivate the budding scientists of future.

We heartily welcome the enthusiastic participation from the Chemistry teaching & research community from academic institutions in and around Kolkata.
